VII.	DRY CHEMISTRY REAGENTS 1. The lowest responsive bidder will provide brand new fully automated machine and Automatic Voltage Regulator with time delay. 2. The machine to be provided must be High end machine, LIS ready, table top/floor type, user friendly, easy to operate, indicate the Brand and Model of the machine to be installed. 3. The lowest responsive bidder will shoulder the integration of its machine to Hospital LIS. 4. To provide brochure of the machine for initial assessment of the machine and reagent. 5. To conduct product demonstration and assessment of the reagent on the machine to be installed. 6. Controls and calibrators are free for one(1) year or until the duration of the contract expires. Delivery must be on the same time with the delivery of their reagents. 7. Preventive maintenance of the machine will be shouldered by the company including replacement of any defective machine parts. 8. Preventive Maintenance and Quarterly calibration of the machine will be shouldered by the company with service report and certificate of calibration. 9. To provide all other consumable reagents and supplies (sample cups, cuvettes, tips, etc.) needed in the analysis free of charge. Delivery of these consumables must be on the same time with their respective reagents. 10. Reagents used on wastage during repair and validation/calibration must be replaced by the supplier. 11. The supplier will maintain the temperature requirement of their machine. 12. No reagents preparation required. 13. Reagents are bar coded and the same brand with the machine to be install. 14. To maintain viability of reagents the lowest responsive bidder shall provide refrigerator (to be pulled out after their contract). 15. The supplier will strictly replace all reagents and supplies 2 months before expiration date if it will not be consumed within 2 months. 16. Machine must have STAT capability to speed up delivery of results. 17. Machine must have a Cof Detection System with immediate flagging of faulty samples. 18. Barcoded reagents for positive reagent identification. 19. Must have an onboard refrigeration to prevent reagent evaporation and degradation. 20. On screen inventory of remaining tests per reagent for good reagent management. 21. Machine must have a waste management system wherein end users/ operators will have no contact on waste cuvettes especially those used in processing known infectious samples. This is to safeguard the operator/ end user from harmful infectious agents. 22. Machine must have a waste management system where in no splashes of liquid waste are to be observed especially on the waste compartment. This is to safeguard the operator/ end user from harmful infectious agents. 23. Machine must have a good quality assurance interface wherein there is a good performance on quality control and calibration. Running of both calibration and quality control must minimize reruns and re-constitution of calibrators and quality control materials to yield good/ acceptable results. 24. Machine must be capable of doing Random Access in processing samples with their requested lab examination. 25. Printers used by analyzers are to be regularly maintained including resetting of printer pads and replacement of parts needed for operation. 26. Service engineers should be responsive in cases of unexpected analyzer breakdown. Immediate response of repair should be done within 12 hours after breakdown was reported. Documentation and service report shall be generated after machine has been repaired or restored.
